

How to change the name and country of the ShotCam?

1. Use a USB-C cable to connect the M1A2+ shot timer to your computer (Windows OS). Then, run the "Shoot ID" software and ensure the timer is successfully connected to the computer (The "Online" status should be displayed).
2. Set the name and country. (The national flag stands for the language)
3. After inputting the information, click the "Save" button.
4. Restart the timer.

5. Turn on the ShotCam and wait for the timer connect to it. Make sure they are connected via Bluetooth. The Bluetooth icon will be displayed on the homepage of the timer when the connection is successful.

If they do not connect automatically, long-press the timer's right button to enter more setting, scroll down to find the System > Bluetooth, and manually long-press the left button to refresh to connect the camera.

6. Open the AiKUCAM APP on your phone and connect the ShotCam via Wi-Fi. Choose the camera to enter the preview page to check if the set are complete.
