

Intelligent network Target system

AKP1 Intelligent network Target system (Auto Targets system) is a wireless connected targets system that is consisted of more than 6 units targets, a remote control and a led display, a shooting software with 9 shooting modes. It can enable shooters to interact with the shooting targets in a way never be possible before. With its powerful hit sensing technology and revolutionary program, Auto Target system can truly improve the shooting skills.

Application: indoor and outdoor, Laser Shooting and Airsoft BBs Shooting.

Outstanding Features

1. Interactive Automatic target system

What makes auto target system so revolutionary is its advanced hit detection technology. This provides immediate feedback of shot status at any distances. The available targets detect shots from hits and then send data back to the display that will draw total time, missed and wrong shots, and give orders of standing up and down to targets.

2. Wireless Automatic target system

A single target weighs only 2KG, so it is easy to carry them to put anywhere you want when building shooting stage. Targets pop up and down in less than 0.50 seconds and the long life rechargeable battery inside enable it work continuously over 72 hours without charge. So it is a complete wireless target system, no need connecting cables and power cables.

3. Various Shooting Modes

There are 9 shooting modes, from easy to difficult. Rules of time limitation and non-shooting targets (hostage targets) are added to the system, which makes it more challenging to shoot. Green targets mean shooting and red targets means non-shooting. All green targets in 1-3 shooting modes, red targets will show from 4-9 shooting modes.

4. Remote Control Target System in 200M.

No more walking down range to replace targets, you can control the all system by sitting on your shooting bench! All the targets and remote control has built-in rechargeable battery, so there is no need for access to power outlets. So it can be transported back and forth to the range easily. Customized targets' face are available with bullseye, animal and other shape designs.

5. Max. 200 targets can be wireless connected in one kit

The AKP1 can be used for air action and laser shooting training. You can set up max. 200 targets at one shooting stage in minutes and control it from the distance of 200M away. Wireless version, best choice for setting up shooting scene in a range.

6. Long stand-by time

There are rechargeable batteries inside of the target and remote controller, which can work continuously for 72 hours after fully charged. So it is extremely convenient for outside usage.

Technical Specification

Brand	Product Name	Intelligent Target System
 SPECIAL PIE	Model	AKP1
	Applicable	Airsoft, Laser
	Major components	Target, LED display, remote control
	Material	Metal
	Control Way	Wireless Control
	Target Type	Auto pop up, green/red target
	Battery capacity of target	5200mAH
	Size of target	230*150*63mm
	N.W. of target	2.05KG
	Size of controller	210*145*55mm
	N.W. of controller	1.46KG
	Size of LED display	620*160*30mm
	N.W. of LED display	2.97KG

	Working Temperature	0-70Celsius
	Storage temperature	-20-70 Celsius
	Operating Environment	Indoor and Outdoor (Except for rainy days)
	G.W. of 6 Targets/Set	21KG
	G.W. of 12 Targets/Set	36KG
